Overwing (emergency) exit door light on. (including video) 737-6/7/8/900. 737: 52 Doors. When you get an overwing exit door light ON on the P5 overhead panel, it could be the solenoid not working correctly when commanded. Experience showed that the solenoid gets 28VDC when the emergency doors need to be locked, but that the solenoid could be a bit sticky or slow to retract (due to dirt, dust or moisture), causing the warning light on P5 to go ON.

### OVERWING EXITS OPERATIONS

In most aircraft the overwing exits are equipped with inflatable slides that inflate aft over the wing trailing edge (see the image in the other answer). However in some aircraft it is indeed intended that the escaping persons will slide down the flaps, most notably on Boeing 737:

Does opening of emergency doors over wings, lead to ...

This is due to the overwing exit automatic locking function being slightly slow. Maximum wind speed for door operation: 40kts . The doors may remain latched open in winds of up to: 65Kts . (AMM 52-10-00-011 Rev 0 09) 200C door panel. Classic door panel.

### BOEING B737: DOORS

Boeing 737 overwing exit. Overwing exits are smaller in width and height than standard emergency exits on an aircraft, and therefore have a reduced evacuation capacity, and are typically added to aircraft where there is insufficient evacuation capacity at the main doors to obtain a 90 second evacuation, but where the addition of another set of full sized exits is not necessary to accomplish this.

Overwing exits - Wikipedia

Exit Doors: NORMAL INFLIGHT OPERATION: Flight locks engaged when either engine N2 is more than 50% and 3 or more Entry/Service doors are closed. NORMAL ON GROUND OPERATION: Flight locks disengaged when either thrust lever is set below approximately 53 degrees and air/ground sensors are in the minimum for dispatch list by the way.

## Read Online 737 Overwing Exit Door Operation Manual

to provide a means of evacuation onto the wing, where passengers either continue off the trailing edge by sliding down the extended flaps or by using an evacuation slide that deploys when the exit is opened.

Overwing exits - WikiMili, The Free Encyclopedia

The second type is the self-disposing Type IIIB hatch, found on more modern aircraft (such as the Boeing 737 Next Generation) which has been designed to both simplify the opening of the exit and to reduce the hazard of the removed hatch blocking the exit. This is accomplished by the passengers simply pulling in and down on a handle recessed into the top of the door and initiating the exit's self-opening mechanism, whereby the door rotates up and out on a hinge at the top of the exit frame.

Overwing exits — Wikipedia Republished // WIKI 2

To close: push switch upward, once door is closed, raise red latch, pull door control handle down to lock door. Overwing Exit (Type IV) 4 overwing exits, 2 on each side of cabin. To open: draw shade upward; push adjacent seat backs down FWD.
