~~Bird Adaptations Beaks and Feet - Tale of Chipile~~

The feathers on this raptor (bird of prey) extend much farther down the legs than the feathers of most birds. Some birds, like the Snowy Owl, also have feathers that cover their feet. The feathers help keep the birds' feet warm in extremely cold weather. Most birds use their beaks for preening (grooming), but many also use their feet. Birds developed the habit of using their beaks and feet for preening because their "hands" have evolved into wings.

## ~~Bird Beaks And Feet Worksheets—Kiddy Math~~

They use their sturdy, sharp beaks to bore into the timber to make houses and to seek out bugs to eat. Woodpeckers hammer into the timber with their beaks to seek out bugs, which they pull out with their long tongues. Bushes additionally make safe houses for the birds, who make holes to put their eggs and nest inside timber.

## ~~Woodpecker Adaptations—How Do They Survive—Bird Baron~~

Take a closer look at the birds around you. You may wonder why a robin has a thin beak, while a sparrow ' s is thick. Or why the robin is alone, while the sparrows are in a flock. Adaptation gives a good reason for what every bird looks like, and why it behaves the way it does.
