A dual-band blade antenna, is a type of blade antenna, a monopole whip antenna mounted on the outside of an aircraft in the form of a blade-shaped aerodynamic fairing to reduce its air drag. It is used by avionics radio communication systems. The dual band type uses a "plane and slot" design to get efficient omni-directional coverage so that it can operate on two different radio bands.

Dual-band blade antenna - Wikipedia

Maximizing E-band potential with dual band antennas. When building the networks of the future, you need to solve the challenges of strained capacity and backhaul in geographically challenged areas. Dual band microwave backhaul antennas can help you address this problem. Discover how dual band antennas can help maximize your E-band potential in this white paper.

Top 10 Best Dual Band Car Antenna in 2020 (Reviews / Ratings)

Dual band antennas have lots of practical uses, especially for mobile devices. These antennas operate on two bands or frequencies (similar to radio stations) and can either work on these different frequencies one at a time or simultaneously, depending on the capabilities of the individual antenna.

Explaing Dual Band Antennas - Networking News

Dual band antennas can be fabricated with much less footprint area compared to two different antennas at required frequencies if properly designed. In some cases, device might need to...

The dual-band antennas combine the high throughput of E-band frequencies with the broader coverage of microwave frequency bands to create a wireless backhaul offering for 5G networks. According to RFS, the products will allow operators to support larger volumes of 5G traffic over longer distances compared to single-band microwave solutions as well as with lower latency compared to fibre-based backhaul.

Hence, the antenna is flawlessly compatible with different repeaters. In terms of signals, the Comet Original GP-3 Dual-Band 146/446 MHz supports two bands of UHF and VHF. Specifically, the exact spectrums are 144-148 Mhz for 2M and 440-450 Mhz for 440 UHF, respectively. Without alteration, the VSWR on 2M is 1.2, and that on 70cm is 1.35.

Dual-Band Sector Antenna (9/12 dBi Gain) Designed for use with certain Cisco Meraki outdoor APs. The sector antenna can extend the range of a Cisco Meraki outdoor access point by focusing the wireless signal in a specific direction; the best way to establish a medium distance point-to-point or point to multi-point wireless link.

Dual-Band-Sector Antenna (9/12 dBi Gain) | Cisco Meraki

The modelled network data shows that aggregating traffic with a dual band antenna has significant improvements: Maximum distance of the E-band signal more than doubles: from 1.5 to 3.8 miles (2.14 to 6.18 km) E-band throughput rises over 1600% from 186 Mbps to 3,124 Mbps; Throughput of 23GHz increases over 400%: from 37 Mbps to 162 Mbps
