This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of

Interdisciplinary science:
work in one area
(developmental biology)
induces most fruitful ideas
in other areas (theory of
formal languages and
automata, and formal power
series). As evident from the
articles and references in
this book, the interest in
L systems is continuously
growing. For newcomers the
first contact with L systems
usually happens via the most
basic class of L systems,
namely, DOL systems. Here

Type 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Not because his taste in art is questionable but because the thief's intimate knowledge of the museum and its collections indicates much more is at stake. Is the thief a friend or stranger? It doesn't help that the population of Platts Landing, Washington, has just blossomed with the influx of Hollywood movie-types roaming the countryside in search of the perfect setting for their next documentary.
