Oecd Green Growth Studies Compact

A Comparative Assessment. This book examines the concept of the compact city and the implication of the current urban context for compact city policies. It explores their potential outcomes, particularly in terms of how it can contribute to Green Growth and looks at developing indicators to monitor compact city and track policy performance. It reviews compact city policies currently being implemented across the OECD in relation to the pursuit of Green Growth objectives and provides ideas to ...

OECD Green Growth Studies Compact City Policies The OECD Green Growth Strategy aims to provide concrete recommendations and measurement tools, including indicators, to support countries' efforts to achieve economic growth and development, while ensuring that natural assets continue to provide the resources and environmental services on which well-being relies.

OECD Green Growth Studies - OECD iLibrary

It explores how a compact city can contribute to urban sustainability goals. A particular focus is the link between environmental and economic outcomes: how the compact city can help to support and foster economic growth while addressing environmental concerns. This is a central concern of the OECD's Green Growth Strategy.

This report is thus intended as "food for thought" for national, sub-national and municipal governments as they seek to address their economic and environmental challenges through the development and implementation of spatial strategies in pursuit of Green Growth objectives.

This report is thus intended as "food for thought" for national, sub-national and municipal governments as they seek to address their economic and environmental challenges through the development and implementation of spatial strategies in pursuit of Green Growth objectives.

This report examines Korea's urban policies and offers customised policy recommendations based on the OECD publication, Compact City Policies (2012).

This report synthesises the findings from six case studies of urban green growth policies, four at city level (Paris, Chicago, Stockholm, Kitakyushu) and two at the national level (China, Korea). It offers a definition of urban green growth and a framework for analysing how it might play out.

This report provides a new perspective to the nature of urban sprawl and its causes and environmental, social and economic consequences. This perspective, which is based on the multi-dimensionality of urban sprawl, sets the foundations for the construction of new indicators to measure the various facets of urban sprawl. The report uses new datasets to compute these indicators for more than 1100 urban areas in 29 OECD countries over the period 1990-2014. It then relies on cross-city, country-level and cross-country analyses of these indicators to provide insights into the current situation and evolution of urban sprawl in OECD cities. In addition, the report offers a critical assessment of the causes and consequences of urban sprawl and discusses policy options to steer urban development to more environmentally sustainable forms.

This report examines Korea's urban policies and offers customised policy recommendations based on the OECD publication, Compact City Policies (2012). Some Korean policies, such as urban regeneration, new town development or multi-modal transferring centers, have implicitly implemented compact city polices to a certain degree. However, there are still issues - including urban sprawl, unbalanced socio-economic levels and environmental challenges - which can be threats to urban competitiveness. An appropriate set of compact city polices, such as environmental friendly urban regeneration, mixed land use, polices to offset the side effects of compact development, strong management of transport demands, and governance enforcement, can accelerate Korean cities' sustainable development.

This report studies green growth trends, challenges and opportunities in the City of Kitakyushu, Japan.

Inclusive Green Growth: The Pathway to Sustainable Development makes the case that greening growth is necessary, efficient, and affordable. Yet spurring growth without ensuring equity will thwart efforts to reduce poverty and improve access to health, education, and infrastructure services.

This book examines trends in ageing societies and urban development before assessing the impact of ageing populations on urban areas and strategies for policy and governance. It includes 9 case studies.

This report studies green growth trends, challenges and opportunities in the City of Stockholm, Sweden.
