The utilisation of renewable energies is not at all new; in the history of mankind renewable energies have for a long time been the primary possibility of generating energy. This only changed with industrial revolution when lignite and hard coal became increasingly more important. Later on, also crude oil gained importance. Offering the advantages of easy transportation and processing also as a raw material, crude oil has become one of the prime energy carriers applied today. Moreover, natural gas used for space heating and power provision as well as a transportation fuel has become increasingly important, as it is abundantly available and only requires low investments in terms of energy conversion facilities. As fossil energy carriers were increasingly used for energy generation, at least by the industrialised countries, the application of renewable energies decreased in absolute and relative terms; besides a few exceptions, renewable energies are of secondary importance with regard to overall energy generation.

As the Baby Boomers age, concerns over healthcare systems abilities to accommodate geriatric patients grow increasingly challenging. The increased life expectancy of the population since the early 1900s had been built on the improvement of living conditions, diet, public health and advancement in medical care. With this we have seen a steady decline in the age-specific prevalence of vascular and heart diseases, stroke and even dementia. In addition, societies worldwide struggle to develop a large enough workforce to treat aging patients, which forces geriatric patients to rely on physicians in a wide array of specialties that are often not trained for their demographic. These trends have created a tremendous need for trustworthy resources, yet with regard to hypotensive syndromes, nothing of this nature exists. Hypotensive syndromes represent a heterogenous group of disease states. Hypotensive syndromes are characterized by low blood pressure following postural changes, meals and neck turning. These are common conditions seen in the elderly and could be due to blood pressure dysregulation. These syndromes frequently cause dizziness, syncope and falls in the elderly as well as a resultant decrease in function, and they are frequently mistaken for other conditions. This is especially true among physicians who are not trained to consider the unique needs of an aging patient. The proposed book is designed to present a comprehensive approach to the management of hypotensive syndromes in the elderly. Currently there are no guidelines or good resource to guide about these conditions. This book will also discuss the challenges of diagnosis and management of these conditions. The text introduces the concepts to set a clear foundation before covering the syndromes as they present in other comorbidities, including diabetes, heart failure, and a wide array of serious conditions that are common in older patients. As the Baby Boomers continue to age, this text will prove a vital resource for a wide array of specialties that will be increasingly critical to meeting their needs.

Control of Solar Energy Systems details the main solar energy systems, problems involved with their control, and how control systems can help in increasing their efficiency. Thermal energy systems are explored in depth, as are photovoltaic generation and other solar energy applications such as solar furnaces and solar refrigeration systems. This second and updated edition of Advanced Control of Solar Plants includes new material on: solar towers and solar tracking; heliostat calibration, characterization and offset correction; solar radiation, estimation, prediction, and computation; and integrated control of solar plants. This new edition contains worked examples in the text as well as proposed exercises and simulation models and so will be of great use to the student and academic, as well as the industrial practitioner.

Taking responsibility for the son he never knew he had, Ty Svenson parks himself in Bishop, Arkansas, where he goes up against his pretty—and uptight—new neighbor, Shelby Monroe, until he realizes that she is his son's elementary school art teacher and the only one willing to help his troubled boy. Original.

Does mental disorder cause crime? Does crime cause mental disorder? And if either of these could be proved to be true what consequences should stem for those who find themselves deemed mentally disordered offenders? Mental Health and Crime examines the nature of the relationship between mental disorder and crime. It concludes that the broad definition of what is an all too common human condition – mental disorder – and the widespread occurrence of an equally all too common human behaviour – that of offending – would make unlikely any definitive or easy answer to such questions. For those who offend in the context of mental disorder, many aspects of the criminal justice process, and of the disposals that follow, are adapted to take account of a relationship between mental disorder and crime. But if the very relationship is questionable, is the way in which we deal with such offenders discriminatory? Or is it perhaps to their benefit to be thought of as less responsible for their offending than fully culpable offenders? The book thus explores not only the nature of the relationship, but also the human rights and legal issues arising. It also looks at some of the permutations in the therapeutic process that can ensue when those with mental health problems are treated in the context of their offending behaviour.
