The main focus of behavioural ecologists has been on the negative effects of parasites on host behaviour. However, there are instances in which infected hosts express more adaptive behavioural phenotypes and have higher fitness relative to uninfected hosts, suggesting that it is sometimes beneficial to be parasitized.

We identify two major routes by which parasites might influence the evolution of

Download Free The Behavioural Ecology Of

~~Parasitism~~ animal personality. First, because the risk of acquiring parasites can be influenced by an individual's behavioural type, local parasite regimes may impose selection on personality traits and behavioural syndromes (correlations between personality traits).

~~Parasitism and the evolutionary ecology of animal personality~~

If host ecological traits affect parasite diversity (Arriero and Moller, 2008; Bordes and Morand, 2009a) and parasites impact host life-traits by diverting resources or eliciting

~~The Behavioural Ecology of
Parasites - Google Books~~
Abstract. Parasitism is a
pervasive phenomenon in
nature involving, either as
hosts or as parasites,
virtually all species on
earth. By definition,
parasites are costly for
their hosts as they divert
resources for their growth,
reproduction and survival
with no rewards for the
hosts.
