These sections may be omitted by those who have already had a course in analytic geometry. Chapter 2 is the heart of any first course in the calculus. I have defined a function as a set of ordered pairs and have used this idea to point up the concept of a function as a correspondence between sets of real numbers.

in its seventh edition. The author has sought to utilize the technology now available for the teaching and learning of calculus. The hand-held graphics calculator is one such form of technology that has been integrated into the book. Topics in algebra, trigonometry, and analytical geometry appear in the Appendix.

A gentle introduction to the geometry of convex sets in  $n$ -dimensional space Geometry of Convex Sets begins with basic definitions of the linear concepts of addition and scalar multiplication and then defines

the notion of convexity for subsets of  $n$ -dimensional space. Many properties of convex sets can be discovered using just the linear structure. However, for more interesting results, it is necessary to discuss the notion of distance about open sets, closed sets, bounded sets, and compact sets. The book illustrates the interplay between these linear and topological concepts, which makes the notion of convexity so appealing. Thoroughly class-tested, the book discusses topology and convexity in the context of normed linear spaces, specifically with a norm topology on an  $n$ -dimensional space. Geometry of Convex Sets also features: An introduction to  $n$ -dimensional geometry including points; lines;

learning the various applications of higher geometry, the book is also appropriate for teachers who would like to convey a better understanding and appreciation of the field to students.

This volume is comprised of chapters one through nine of Calculus, 6th edition by Swokowski. This calculus book has been updated to include the calculator/computer technology that is reshaping the course. The text's features are its use of applications and examples and exercises to reinforce conceptualization of the subject matter.
